Tips for Efficient EPIC EMR Use by Hospitalist Physicians: EPIC EMR adoption is on the rise as hospitals shift from their previous systems. After using EPIC for a few years, I've gathered some tips to help you quickly set up tabs and boost efficiency. As each hospital has its unique version of EPIC, it's essential to find your own workflow. Key Benefits: - Create personalized templates for H&P, Progress notes, Discharge summaries, etc., saving time. - Pull updated labs, imaging studies, vitals, and more with just a few clicks, preparing most of your notes in advance. - Utilize the "Notify Me" feature when ordering tests to receive mobile notifications. - Make SmartPhrases for frequently used text snippets or diagnoses like COVID 19. Customization: - Designate specific colors for templates for a visually appealing experience. - Personalize your home page by adjusting columns and their order. - Discover and incorporate smart phrases from others' notes by copying and creating new SmartPhrases. The template for a patient's chart has several sections. These include the New Notes, Patient Name, and New Results fields. There is also space for My Sticky Note with specific text. The To Do -Care Mgmt section keeps track of expected discharge dates and times. Below these sections are the Adm Dx (admission diagnosis), Need Admit Med Rec (need medical record from admission), and Need D/C Med Rec (need medical record from discharge) fields. Follow up with PCP in {NUMBERS 0-10:22140} days, {TIME FRAME:20514}. Follow up with consultation in {NUMBERS 0-10:22140} days, {TIME FRAME:20514}. **Pending Test Results/Follow Up Tests** ***Hospital Course:*** ***Vital Signs:** @VITALS@ ***Physical Exam:** AAOX3RS: CTAB Discharge Instructions: - Take all medications as prescribed. - Keep all follow-up appointments. - Contact your primary care physician with any questions or concerns that arise. - Come to the emergency department with worsening symptoms, severe chest pain, shortness of breath, or any other medical emergency. **Tips for Hospitalist Physicians Using EPIC EMR** EPIC's flexibility allows customization of templates for H&P, Progress notes, Discharge summaries, and more. The system can be set up to notify you when tests are ordered, providing updates directly on your mobile app. Pre-Prepared order sets for conditions like CVA and CHF ensure compliance with core measures. The EPIC interface is clean and spacious, allowing you to design your notes' appearance and workflow efficiently. You can also create Dot phrases (SmartPhrases) that include pre-formatted text for quicker note completion. By clicking the "copy" button on another user's note and then creating a SmartPhrase from selected text, you can incorporate their used phrases into your own notes. Adjusting columns and tabs to fit your workflow is also possible with EPIC. Customizing these features not only enhances efficiency but also contributes to developing a personal workflow that suits each hospitalist physician uniquely over time. By clicking on that star symbol before signing your orders, it makes them easily accessible and ready to reorder next time! You can turn almost anything into a favorite for quick access. Even create shortcut phrases for common diagnoses like COVID-19. I organized my patient list with columns in this order: Current Location, MRN, Age, Patient Class, Adm Date, New Notes, Patient Name, New Results... This arrangement helps me quickly find the needed info. Below are a few pictures showing how I customized my screen. You can see my H&P template and Progress Notes Template at the bottom. The top row buttons after opening an individual chart are in this order: Chart Review, Discharge, Flowsheets, MAR, Manage Orders... And on the left side, you'll find In Basket, Hospital Chart, My Smart Phrases... You can even look up smartphrases made by others and copy them into your own account! Use the Search button if you're having trouble finding something. And don't forget to change the colors of your EPIC screen by clicking on the theme settings in the top left corner. If you want to create a new panel, click on Options next to Manage Orders and Order Sets. You can also use My Sticky Note for reminders... And when sorting notes, just click that wrench icon and choose Note list layout settings. If you change it from Author Name to Service, your notes section will show specialty names instead. Lastly, did you know you can make a graph of vitals using Flowsheets? It's really helpful in seeing trends! And for discharge summaries, I use this template with patient ID, MRN, and date of admission... Discharge Summary: Physician: @MEMD@ Primary Care Physician: @PCP@ Diagnoses: {condition:18240} (same as admission condition) Procedures: Consultants: {consultation:18241} Lab Tests and Diagnostic Studies: Complete blood count: normal Blood urea nitrogen: 3 Creatinine: 3 Sodium: 3 Potassium: 3 Chloride: 3 Carbon dioxide: 3 Magnesium: 3 Phosphate: 3 International normalized ratio: 3 Diagnostic Studies: TSH (thyroid-stimulating hormone): normal Other tests: {trk diagnostic studies:35768} Discharge Medications: @DISCHARGEMEDSLIST@ Disposition: @MRDDSPOCOMMENT@ Follow-up: Follow up with PCP in {NUMBERS 0-10:22140} and {TIME FRAME:20514} Follow up with {consultation:18241} in {NUMBERS 0-10:22140} and {TIME FRAME:20514} Vital Signs: @VITALS@ Physical Exam: Auscultation: normal Respiration rate: CTAB (no added sounds) Blood pressure: soft NT RRR (regular respiration rate): abd (normal) Discharge Instructions: Take all medications as prescribed. Keep all follow-up appointments. Contact your primary care physician with any questions or concerns that arise. Come to the emergency department with worsening of symptoms, severe chest pain, shortness of breath, or any other medical emergency.
